## Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 3 of 11

1	available, acceptable non-infringing alternative at the time of Google's first infringement for at	
2	least the reasons discussed above and discussed in my Prior Submissions.	
3	B. Dr. Bhattacharjee's Alternative	
4	259. Dr. Bhattacharjee opines that "as [he] showed in [his] opening report, a non-	
5	infringing alternative that was available to Google at the time the '033 patent issued was for the	
6	receiver device not to send the accused ." Bhatta. Rebuttal	
7	Report, ¶288. I disagree for various reasons.	
8	260. To start, Google and Dr. Bhattacharjee's explanation of this purported alternative	
9	has been a moving target, ambiguous as to what the alleged alternative even is, and inconsistent	
10	with respect to what functionality is involved.	
11	261. As I explained in my Opening Report, Google's own explanation of this purported	
12	alternative to the Asserted Claims of the '033 Patent is vague and incomplete. See Schmidt Op.	
13	Report, ¶¶496-504. I have been informed that Google first identified and explained this purported	
14	alternative as to the Asserted Claims of the '033 Patent on November 21, 2022, which I understand	
15	was a mere 9 days before fact discovery closed on November 30, 2022. See Google LLC's Eighth	
16	Supplemental Objections and Responses to Plaintiff Sonos Inc.'s First Set of Fact Discovery	
17	Interrogatories (No. 18), pp. 13-14. In any case, Google's interrogatory response states the	
18	following:	
19	[A] non-infringing alternative is for the receiver device to Instead, in Alternative 32 [sic] the receiver device	
20	would send a request to a .	
21	. In other words, in Alternative #3 the receiver	
22	device does not "obtain data identifying a next one or more media items that are in the remote playback queue," and does not "use the obtained data to retrieve at least	
23	one media item in the remote playback queue from the cloud-based media service."	
24	Id., p. 13.	
25	262. Google continues by asserting that it	
26		
27	" <i>Id.</i> , pp. 13-14. Google concludes by stating	
28	are discussed in further detail in the opening and rebuttal [showdown]	
	reports of Dr. Bhattacharjee, which are incorporated herein by reference." <i>Id.</i> , p. 14.	

## Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 4 of 11

1	263. While Dr. Bhattacharjee did discuss in this Showdown
2	reports, that discussion was in the context of claim 13 of the '615 Patent that has different
3	limitations than the Asserted Claims of '033 Patent. In that context, with respect to Dr.
4	Bhattacharjee stated that, for a non-Casting use case,
5	platform in which after
6	to obtain both the alleged 'resource locators' and multimedia content." Bhatta.
7	Op. Showdown Report, ¶590. Dr. Bhattacharjee characterized "the alleged 'resource locators'" as
8	"a, or streaming URL from the" Id., ¶589. As I explained
9	before, a WatchNext response that a Receiver obtains contains a videoId identifying the next media
10	item that the Receiver is to playback.
11	264. Dr. Bhattacharjee continued by stating he understood that:
12	in a WatchNext response:
13	in a machinest response.
14	GetWatchNext response via chunked HTTP."

3	detail in the opening and rebuttal reports of are discussed in greater	
	Dr. Bhattacharjee, which are incorporated detail in my opening and rebuttal reports for	
4	herein by reference. claim 13 of the '615 patent, which I incorporate herein by reference.	
5	268. Now, in his Rebuttal Report, Dr. Bhattacharjee describes the purported combined	
6		
7	alternative in much greater detail than he or Google has ever before, but	
8	some of his new description is inconsistent with his description in his Showdown Reports. See	
9	Bhatta. Rebuttal Report, ¶¶289, 295-97,	
10	269. For example, Dr. Bhattacharjee now claims that the request that the Receiver sends	
	to the longer includes a videoId but rather only a playlistId. See Bhatta. Rebuttal	
11	Report, ¶289	
12		
13		
14		
15	I note that the very passage from a Google internal	
	document that Dr. Bhattacharjee cites for this proposition states that the request	
16		
17	but more to the point, the passage explains that the discussion of only including a	
18	playlistId to the exclusion of a videoId in the request is only for	
19	<i>Id.</i> Thus, it does not appear to me that (i) Dr. Bhattacharjee is accurately describing the	
20	contents of the request that the Receiver sends and (ii) the contents of the request is the same for	
21		
22	all types of playback.	
23	270. As another example, Dr. Bhattacharjee explains that, for the	
	purported alternative, a Receiver "would for a media item (e.g., a song or	
24	video) each time it starts playback of the next media item" and "the response returns media	
25	content for the beginning of the song or video followed by the	
26	containing of the senger vides in fellowed by the	
27		
28	and he opines	

#### Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 7 of 11

#### HIGHLY CONFIDENTIAL - SOURCE CODE - ATTORNEYS' EYES ONLY

Bhatta. Rebuttal Report, ¶296.

271. Having the benefit of more details of this purported combined
alternative, I agree that a does not amount to limitation 1.7's "data identifying
a next one or more media items that are in the remote playback queue," but as I explain below, the
videoId for the next media item contained in the WatchNextResponse portion of the
response does. Indeed, Dr. Bhattacharjee acknowledges that, in this purported combined
alternative, "a videoId is used to retrieve the first several seconds of
media content." Bhatta. Rebuttal Report, ¶297. As I explained above, I disagree with Dr.
Bhattacharjee's position that limitation 1.7 requires a single piece of data to be used to retrieve the
entire media item, but rather, limitation 1.7 merely requires the "playback device" be configured
to "use the obtained data to retrieve at least one media item in the remote playback queue from the
cloud-based media service," which the Receiver does with the videoId of the next media item.
Supra ¶¶189-94.
272. As another example, in response to my explanation "that this non-infringing

272. As another example, in response to my explanation "that this non-infringing alternative would still infringe because ... a receiver device would use 'WatchNextResponse data' to retrieve a media item" (Bhatta. Rebuttal Report, ¶298), Dr. Bhattacharjee contends:

But Dr. Schmidt misunderstands this alternative. Google's documents indicate that it has discussed different options for implementing back playlists on a receiver device,

See GOOG-SONOSNDCA-00070863 (
at -913

A receiver device would not use a videoId ("WatchNextResponse data") to retrieve the content

device would not use a videoId ("WatchNextResponse data") to retrieve the content for *the media items* in the receiver device.

Id.

273. Dr. Bhattacharjee's explanation here is inconsistent with his prior explanation from his Showdown Report and different from what Google advanced in its interrogatory response. In this regard, Dr. Bhattacharjee is now inconsistently saying a *single* request to the would somehow result in the Receiver obtaining *all* subsequent media items and WatchNextResponses. In fact, Dr. Bhattacharjee's assertion is not even supported by the document

## Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 8 of 11

1	that he cites,
2	·
3	274. Dr. Bhattacharjee appears to be saying that his new modification to the purported
4	combined alternative would involve a
5	for <i>each</i> Receiver that is in a Cast session in the United States at any
6	given time, where that newly modified not only provides all media items to a
7	particular Receiver but also manages its particular Receiver's playback through the remote
8	playback queue and somehow manages all WatchNext request/response interactions on behalf of
9	the Receiver. What's more, Dr. Bhattacharjee provides no explanation about how his new
10	modification would enable a user to skip to the next media item without the Receiver storing the
11	videoId of that next media item and exchanging it with the . In this way, Dr.
12	Bhattacharjee appears to be proposing to drastically alter the workload and sophistication of each
13	and again, there would need to be a newly-modified
14	for each Receiver that is in a Cast session in the United States at any given time.
15	Simply put, it is my opinion that such a proposed design would not have been technically feasible
16	and Dr. Bhattacharjee has certainly not explained how it could have been.
17	275. Regardless, I understand that, because Google's interrogatory response incorporates
18	Dr. Bhattacharjee's Showdown Reports by reference and does not otherwise explain the details of
19	the purported combined alternative, the description in Dr. Bhattacharjee's
20	Showdown Reports of this purported alternative is what controls. As I explained in my Rebuttal
21	Report, the alternative described in Dr. Bhattacharjee's Showdown
22	Reports still would infringe limitation 1.7 because the Receiver would still be configured to
23	"communicate with the cloud-based computing system in order to obtain data identifying a next
24	one or more media items that are in the remote playback queue" by virtue of a first
25	(e.g., that returns a WatchNextResponse containing, inter alia, a second videoId for a next media
26	item for the Receiver to playback), which I have illustrated below, and would still be configured to
27	"use the obtained data to retrieve at least one media item in the remote playback queue from the
28	cloud-based media service" by virtue of a second (e.g., that returns (i) media data

#### Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 9 of 11

#### HIGHLY CONFIDENTIAL - SOURCE CODE - ATTORNEYS' EYES ONLY

corresponding to the second videoId and (ii) a WatchNextResponse containing, *inter alia*, a third videoId for a next media item for the Receiver to playback), which I have illustrated below.

276. In stark contrast to what is illustrated above, Dr. Bhattacharjee provides two sets of illustrations of his (new) combined alternative that show a Receiver sending a single request containing a playlistId for a given playlist to the and the Onesie agent in turn streaming media data and meta-data for *all* media items in the playlist, one set of which is reproduced below:

## Case 3:20-cv-06754-WHA Document 474-10 Filed 02/03/23 Page 10 of 11

1	
2	
3	
4	
5	
6	
7	
8	277. Again, Dr. Bhattacharjee's illustrations provide no hint as to how this is technically
9	feasible and obscures the new modifications that he is proposing. The illustration below more
10	accurately reflects some of the necessary (undiscussed and unexplained) modifications for Dr.
11	Bhattacharjee's (new) combined Onesie/Streaming-Watch alternative:
12	
13	
14	
15	
16	
17	
18	
19	
20	278. Dr. Bhattacharjee attempts to minimize the testimony of Google's 30(b)(6) witness,
21	Mr. Mo, that undermines Google and Dr. Bhattacharjee's assertion that "
22	
23	" See Bhatta. Rebuttal Report, ¶290. But I find his positions to be flawed.
24	279. <u>First</u> , Dr. Bhattacharjee acknowledges that Mr. Mo was designated Google's
25	30(b)(6) witness for "the accused casting functionality." <i>Id.</i> , ¶291. The purported
26	alternative of course relates to "the accused casting functionality." See,
27	e.g., Bhatta. Op. Showdown Report, ¶590 ("
28
